

SIM808UNO kits user manual

1. Preparation:

Board	SIM808UNO
Serial tool	Arduino.exe

2. Overview

2.1 Module feature

- Quad-Band GSM 850/900/1800/1900MHz
- GPRS multi-slot class 12/10
- GPRS mobile station class B
- Compliant to GSM phase 2/2+
 - Class 4 (2 W @ 850/900 MHz)
 - Class 1 (1 W @ 1800/1900MHz)
- Control via AT commands (3GPP TS 27.007,27.005 and SIM Com enhanced AT Commands)
- Supply voltage: 6-12V (Please note to use external 9V/1A power adapter to meet the GSM

current requirement.)

- Ultra small dimension: 68.6*53.3mm (Same with Arduino UNO board)
- Low power consumption
- Operation temperature:-40℃ to +85 ℃

- GPS Receiver type

22tracking/66 acquisition-channel GPS L1 C/A code

- Sensitivity

Tracking: -165 dBm

Cold starts: -147 dBm

- Time-To-First-Fix

Cold start: 30s (typ)

Warm start: 28s (typ)

Hot start: 1s (typ)

- Accuracy

Horizontal Position: <2.5m CEP

Introduction

This shield is designed by AND Technologies, with a Quad-band GSM/GPRS engine, it also supports Global Navigation Satellite System. All arduino board interfaces is fan out, easy for you to add your own application board.

The combination of GSM/GPRS/GPS solution allows controlling system, vehicles and people to be tracked anytime and anywhere with signal coverage.

2.3 PCBA dimension: 68.58*53.34mm.

3. How to use TXD and RXD (Default baud rate is 9600bps)

AND Wireless : <http://www.and-global.com>
 OEM PCBA : <http://www.buypcba.com>
 Retail Store : <http://www.aliexpress.com/store/605000>
 Golden supplier on Alibaba : <http://and-global.en.alibaba.com>
 Email : info@and-global.com
 Tel : +86-755-28099797

4. How to test the SIM808UNO by AT command

4.1 Installing GSM antenna, GPS antenna, Power Adapter and SIM card for SIM808UNO. (Please note to install the connector as clockwise direction!)

4.2 Push down SW101 2-3 second, making D100 LED indicator blink(Blink quickly shows un-registration network , Blink slowly shows registration successful .(Note: Should confirm whether SIM card is inserted)

Status	SIM808 behavior
Off	SIM808 is not running
64ms On/800ms Off	SIM808 not registered the network
64ms On/3000ms Off	SIM808 registered the network
64ms On/300ms Off	PPP GPRS communication is established

 Tel : +86-755-28099797

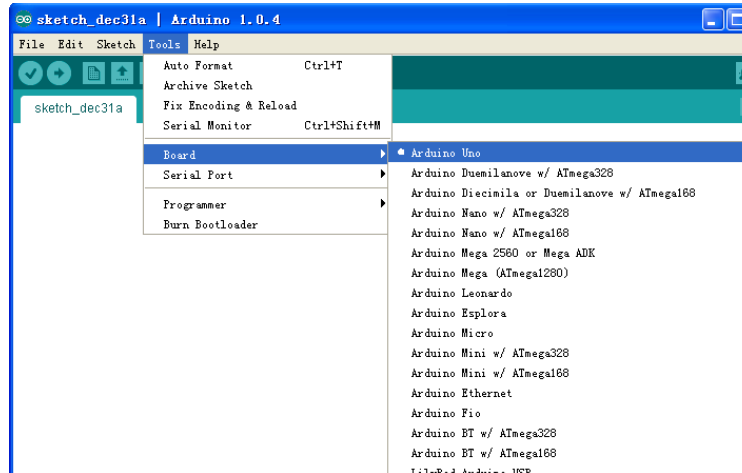

arduino.exe

4.3 Open serial software

basing on Arduino UNO and

choose right serial number, Baud rate as Custom as below:

AND Wireless : <http://www.and-global.com>

OEM PCBA : <http://www.buypcba.com>

Retail Store : <http://www.aliexpress.com/store/605000>

Golden supplier on Alibaba : <http://and-global.en.alibaba.com>

Email : info@and-global.com

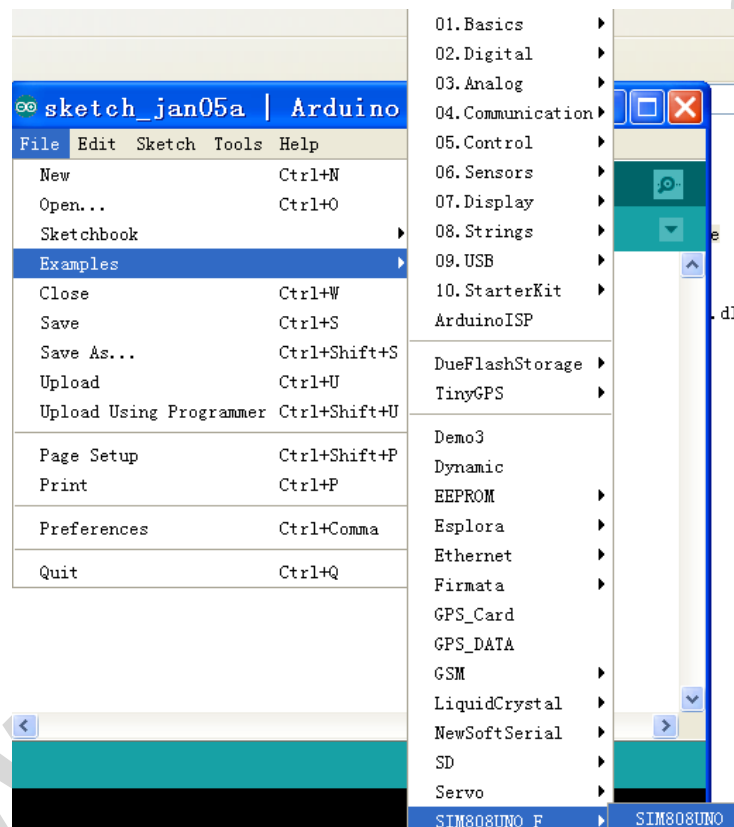

Tel : +86-755-28099797

4.3.1. Unzip SIM808uno.rar file

4.3.2. Copy SIM808UNO file to

arduino-1.0.4-windows\arduino-1.0.4\libraries

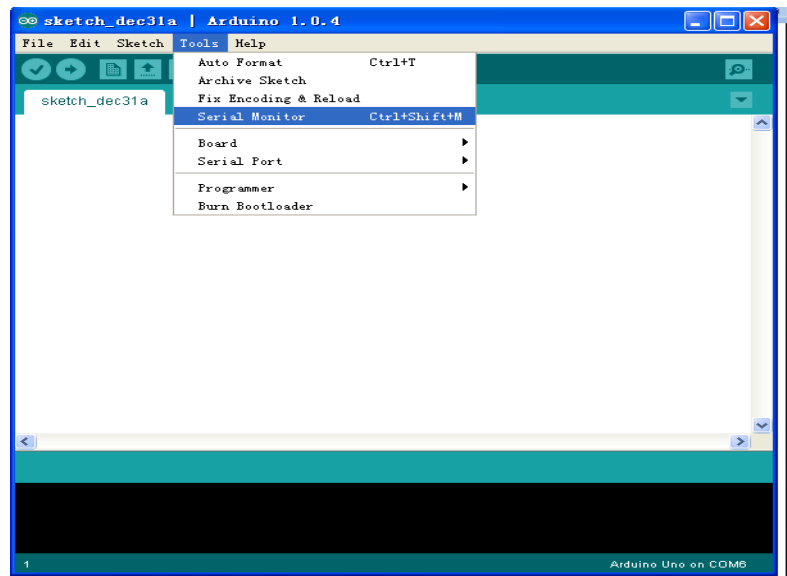

4.3.3. Open arduino.1.0.4 open SIM808UNO project as below

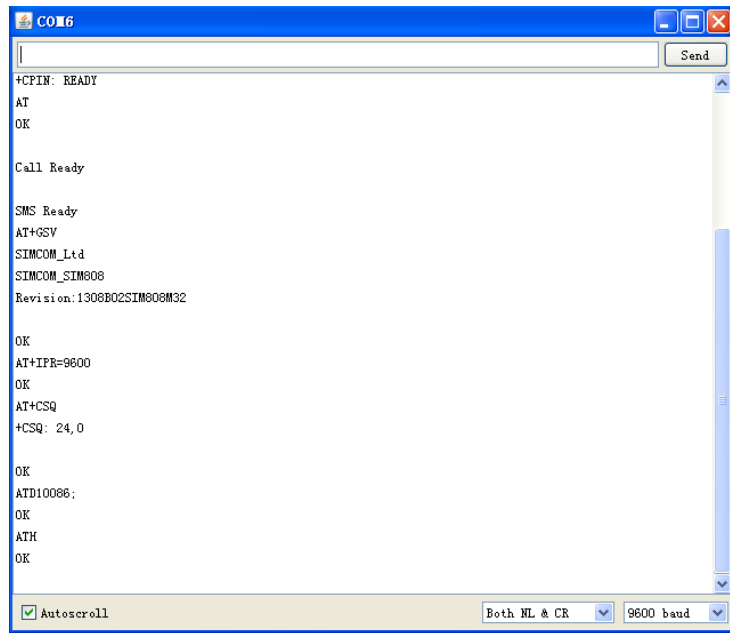

4.3.4. Verify the project and upload the code.

4.3.5 Open the serial monitor, input AT, and click the Send button. Please note the setting.

```
{  
  if (mySerial.available())  
    Serial.write(mySerial.read()); // Arduino send the computer command to SIM808  
  
  if (Serial.available())  
    mySerial.write(Serial.read()); //Arduino send the sim808 feedback to computer  
}
```

The Method to generate the .hex code:

Open the arduino.exe

Open File->preferences to find preferences.txt file path.

Open preferences.txt, and amend build.path=D:\AND\Arduino\hex,save it.

Verify the project and upload the code.

You can find the .hex code under the D:\AND\Arduino\hex\ path.

Note: 1: hex file can be saved to any path
